To install (any of) these layouts, do the following:

1. Find the "avail_langs" array definition in the "vkboards.js" file.
2. Find the "name.js" file in the directory with the desired layout, insert it's contents (as a new array member, separating with commas as necessary) to the "avail_langs" array you've previously found.
3. Find the layout definition file in the directory with the desired layout, it is always the file which accompanies the "name.js". Append it's contents to the end of the "vkboards.js" file, but before the closing "}" symbol.

Each array in these layouts has 49 entries, the same must be when creating new ones.
